

PulseUI Landing Page

Beginner Setup & Run Guide

1. Introduction

This guide explains step-by-step how a beginner can install, start, customize, and build the PulseUI Landing Page project using React, Vite, and Tailwind CSS.

2. System Requirements

- Node.js (v18 or higher recommended)
- npm or yarn package manager
- Modern browser (Chrome, Edge, Firefox)
- Code Editor (VS Code recommended)

3. Project Installation

Step 1: Extract the downloaded project zip file.

Step 2: Open the project folder in VS Code.

Step 3: Open Terminal inside project folder and run:

```
npm install
```

4. Running the Project (Development Mode)

After installation, start the development server:

```
npm run dev
```

Then open browser and visit:

```
http://localhost:5173
```

5. Project Folder Explanation

```
src/
```

■■■ components/	-> Reusable UI sections (Hero, Features, Demos)
■■■ ui/	-> Button, animations, utilities
■■■ assets/	-> Images and static files
■■■ main.tsx	-> App entry point
■■■ App.tsx	-> Main layout structure

6. How to Customize

- Edit text content inside Hero.tsx, Features.tsx, and Demos.tsx
- Replace images inside /public/images folder
- Change colors using Tailwind classes or tailwind.config.js
- Update live preview URLs inside Demos array
- Modify spacing and typography using Tailwind utility classes

7. Build for Production

To create production build:

```
npm run build
```

This will generate a 'dist' folder.

Upload the contents of 'dist' folder to your server.

8. Deployment Note (For Shared Hosting)

```
// vite.config.ts
export default defineConfig({
  base: "/pulse-ui/landing-page/",
})
```

After updating base path, rebuild project and upload dist files to public_html/pulse-ui/landing-page/ directory.
